

## **USB Version of IrDA Adapter For VAD Pro Diagnostic Tool Now Available**

SURREY, BC, April 4, 2009 --Versatile Automotive Diagnostics is pleased to report a 3rd edition IrDA adapter has been added to the accessory lineup of its popular VAD Pro diagnostic tools. The STS-302 USB IrDA adapter, functional with most monochrome laser printers, allows a VAD Pro user to transmit saved diagnostic reporting seamlessly from the infrared port on the top of the VAD Pro to such printers.

The VAD Pro-901 offers an in-depth level of VW/Audi functionality, as well as OBD-II emissions related functionality, for today's modern CAN equipped vehicles in a rugged handheld platform that is both affordable and accessible to the independent garage.

Printable VAD Pro reports include full vehicle scans, data logs and graphs, and emissions reports, from a wide variety of OBD-II vehicles.

This USB adapter can be powered by either an AC power adapter or four AAA batteries, and has a automatic power save and automatic wake up function, giving it very low overall power consumption.

The STS-302 can be viewed at [www.vadpro.com/products.htm](http://www.vadpro.com/products.htm), and ordered by calling VAD, or one of its VAD Pro distributors, directly.
